/note="Organ: Base of developing inflorescence (5cm-long);
/note="Organ: Base of developing inflorescence (5cm-long);
/vector: pSportl; Site 1: SalI; Site 2: NotI; An
unidirectional cDNA library generated from [Base of
developing inflorescence (5cm-long)]. cDNA was prepared
from polyA+ mRNA using SuperScript Plasmid System Kit
(Invitrogen). The double-strand cDNAs were fractionated
in a sepharose CL-2B 40cm-columns and fragments sizing
between 0.8 and 1.5 KD were directionally cloned into the
vector. Details of each source of RNA and library
construction can be obtained at

Altenbach and K. Cronin at USDA-ARS, Albany, CA. A cDNA library was made using poly (A) RNA, and the CDNA clones were in vivo excised to give pBluescript SK(-) phagemids in the TJ Close lab (Chin, Close, Fenton) at the University of California, Riverside Plasmid DNA preparations and DNA sequencing were performed in the OD Anderson lab (others)."

The present invention relates to a new recombinant construct. The construct comprises a promoter operably linked to a DNA sequence which when expressed by a host produces an RNA having homology to at least one target mRNA expressed by the host and complementary RNA regions. The recombinant construct is useful for reducing the expression of a target mRNA or any similar endogenous mRNA. The RNAs expression of a target mRNA or any similar endogenous mRNA. The sequences and their reverse complements can be used to reduce the expression of any endogenous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Unidentified

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              genomic sequence that shares substantial similarity to nucleic acid fragment which is in proximity to the DNA or RNA sequence derived from it. The present sequence is 2X ELVISLIVES complementary repeat region found in plasmid pXS133 used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAD29231 standard; DNA; 154
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 154 BP;
New recombinant construct having a promoter operably linked to a DNA sequence which when expressed produces an RNA having homology to a target mRNA and its reverse complement unrelated to endogenous DNA, for reducing gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Unidentified

The construct comprises a promoter operably linked to a DNA sequence which when expressed by a host produces an RNA having homology to at least one target mRNA expressed by the host and complementary RNA regions. The recombinant construct is useful for reducing the expression of a target mRNA or any similar endogenous mRNA. The RNAs expressed from the recombinant constructs are also used in reducing expression of a target mRNA or any similar endogenous mRNA. The sequences and their reverse complements can be used to reduce the expression of any endogenous genomic sequence that shares substantial similarity to nucleic acid fragment which is in proximity to the DNA or RNA sequence derived from it. The present sequence is 2% ELVISLIVES complementary repeat region DNA found in plasmid pXS133 used in the exemplification of the invention

limiting, to isolate cDNAs and genes encoding homologous proteins from
the same or other plant species and to create transgenic plants in which
the polypeptides are present at higher or lower levels than normal or in
cell types or developmental stages in which they are not normally found,
thus altering the level of mono-, poly- and unsaturated fatty acids in
those cells. They are useful as probes for genetic and physical gene
mapping and as markers, e.g. restriction fragment length polymorphism
(RFLP) markers. The peptides can be used to immunise animals to produce
antibodies specific for the peptides and proteins. The present sequence
is IX ELVUSLIVES complementary repeat region DNA found in plasmid pXS133
This sequence is used in the exemplification of the invention for the
suppression of Pad2 in soybean

                                                                                                                                                                                                                           δ
                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to diverged delta-9 fatty acid desaturase components and polynucleorides encoding such proteins. The nucleic acid sequences may be used to increase the level of unsaturation in cellular clipids, including oil, in tissues when the enzyme is absent or rate-limiting, to isolate cDNAs and genes encoding homologous proteins from the same or other plant species and to create transgenic plants in which the polypeptides are present at higher or lower levels than normal or in cell types or developmental stages in which they are not normally found, thus altering the level of mono-, poly- and unsaturated fatty acids in those cells. They are useful as probes for genetic and physical gene mapping and as markers, e.g. restriction fragment length polymorphism (RFILP) markers. The peptides can be used to immunise animals to produce antibodies specific for the peptides and proteins. The present sequence is 1X EIVISLIVES complementary repeat region DNA found in plasmid pKS133 This sequence is used in the exemplification of the invention for the

The invention relates to decreasing the ratio of liquiritigenin-derived isoflavones relative to the total isoflavones in an isoflavonoid-producing plant comprising transforming a plant cell with a recombinant construct comprising a promoter operably linked to a nucleic acid sequence of at least 200 nucleotides having at least 75% sequence identity to ADQ07965 (a soybean chalcone reductase cDNA). Also included are an isoflavonoid-producing plant made by the method above, seeds or plant parts of the plant, an isoflavonoid-containing protein product having a reduced ratio of liquirities form the plant of liquirities of the plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Decreasing ratio of liquiritigenin-derived isoflavones relative to total isoflavones in a plant comprises transforming plant cell with nucleic acid sequence showing homology to sequence encoding chalcone reductase

```

the total isoflavone levels obtained from the seeds or plant parts, a food (or a nutritional supplement, a food bar, or a beverage) which has incorporated the isoflavonoid-containing product, and a method of producing an isoflavonoid-containing product having a reduced ratio of liquiritigenin-derived isoflavones relative to the total isoflavone levels. The recombinant construct comprises to stem-loop structure. The nucleic acid sequence forms a loop in the stem-loop structure and the stem comprises a sequence of ADQ07968). The promoter is a seed-specific promoter. The method is useful for decreasing the ratio of liquiritigenin derived isoflavones relative to the total isoflavones in an isoflavone-producing plant. The methods and recombinant construct are useful in product, plant food product, snack food product which is incorporated in cereal food product, snack food product, baked good product, fried food product, health food product, infant formula, beverage, nutritional supplement, dairy product, pet food product, or animal feed. The present sequence is the single stranded version of the stem loop region from Sequence 154 BP; 24 A; 53 Ç 53 <u>Ģ</u> 24 T; 0 U; 0 Other; relative to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  б
                                                               The invention relates to decreasing the ratio of liquiritigenin-derived (C) isoflavones relative to the total isoflavones in an isoflavoned. CC producing plant comprising transforming a plant cell with a recombinant CC construct comprising a promoter operably linked to a nucleic acid construct comprising a promoter operably linked to a nucleic acid construct producing a promoter operably linked to a nucleic acid construct comprising a promoter operably linked to a nucleic acid construct to ADQ07965 (a soybean chalcone reductase cDNA). Also included care an isoflavonoid-producing plant made by the method above, seeds or plant parts of the plant, an isoflavonoid-containing protein product converge a reduced ratio of liquiritigenin-derived isoflavones relative to the total isoflavone levels obtained from the seeds or plant parts, a food (or a nutritional supplement, a food bar, or a beverage) which has concorporated the isoflavonoid-containing product, and a method of corducing an isoflavonoid-containing product, and a method of corducing an isoflavonoid-containing product, and a method of corducing an isoflavonoid-containing product having a reduced ratio of liquiritigenin-derived isoflavones relative to the total isoflavone concleic acid sequence of ADQ07968). The promoter is a seed-specific promoter. The method is useful for decreasing the ratio of liquiritigenin concerving a lant The methods and recombinant construct are useful in an isoflavone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      JLT 6

The invention relates to a plant comprising at least one recombinant DNA molecule comprising a promoter operably linked to at least a portion of at least one oxidosqualene cyclase gene, the molecule sufficient to suppress the production of a triterpene or any of its progeny, where the progeny comprise the molecule. The oxidosqualene cyclase gene catalyzes the cyclization of 2,3-oxidosqualene to form a triterpene, e.g. beta-amyrin, lanosterol, lupeol, cycloartenol, alpha-amyrin, isomultiflorenol or any combination. The plants are useful in generating products which may be used as feeds, foods, beverages and industrial products like agricultural adjuvants, concrete supplies, dielectric fluids, dust suppressants, fuel additives, hydraulic fluids, industrial cleaners, industrial lubricants, metalworking fluids, odor reduction, paint
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cereal food product, snack food product, baked good product, fried product, health food product, infant formula, beverage, nutritional supplement, dairy product, pet food product, or animal feed. The pr sequence is the single stranded version of the stem loop region fro plasmid pKS151.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New transgenic plants comprising recombinant DNA molecules encoding oxidosqualene cyclase to lower triterpene level, used as feeds, foo beverages and industrial products like agricultural adjuvants or co

                      The invention relates to a plant comprising at least one recombinant DNA molecule comprising a promoter operably linked to at least a portion of at least one oxidosqualene cyclase gene, the molecule sufficient to suppress the production of a triterpene or any of its progeny, where the progeny comprise the molecule. The oxidosqualene cyclase gene catalyzes the cyclization of 2,3-oxidosqualene to form a triterpene, e.g. beta-amyrin, lanosterol, lupeol, cycloartenol, alpha-amyrin isomultiflorenol or any combination. The plants are useful in generating products which may be used as feeds, foods, beverages and industrial products like agricultural adjuvants, concrete supplies, dielectric fluids, dust suppressants, fuel additives, hydraulic fluids, industrial cleaners, industrial lubricants, metalworking fluids, odor reduction, paint
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New transgenic plants comprising recombinant DNA molecules encoding oxidosqualene cyclase to lower triterpene level, used as feeds, foo beverages and industrial products like agricultural adjuvants or co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Oxidosqualene cyclase; triterpene; plant; soybean; beta-amyrin syntha:
